

EMISSIONI di PM10 nel Veneto

Fonte: *inventario regionale delle emissioni – INEMAR Veneto 2013 – dati definitivi*

Rappresentazione dei grafici a torta delle emissioni per:

- Regione
- Provincia
- Comune Capoluogo

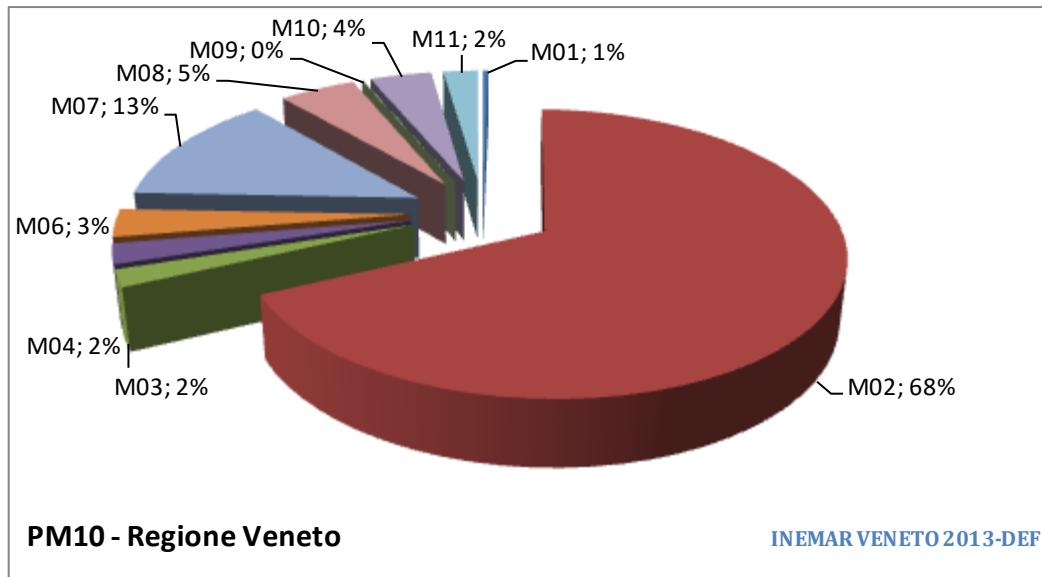

2 scenari:

- ANNUALE: emissioni per macrosettore
- INVERNALE: è stata mantenuta l'emissione su base annuale per il M02-Combustione non industriale (attribuita quasi interamente alla combustione della legna nel semestre invernale) e sono state dimezzate le emissioni annuali per tutti gli altri macrosettori.

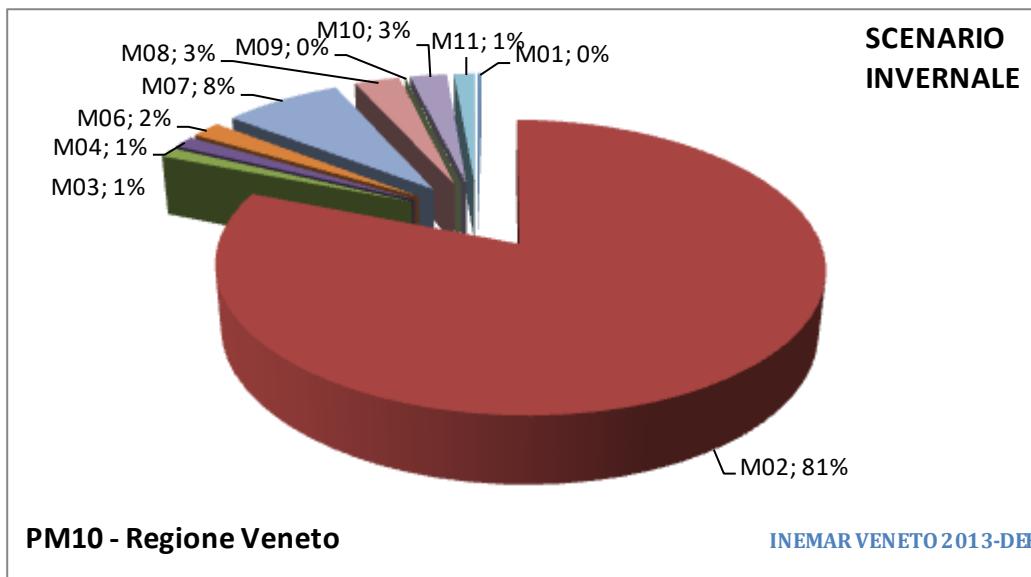

- M1: Combustione - Energia e industria di trasformazione;
- M2: Combustione - Non industriale;
- M3: Combustione - Industria;
- M4: Processi Produttivi;
- M5: Estrazione, distribuzione combustibili fossili / geotermico;
- M6: Uso di solventi;
- M7: Trasporti Stradali;
- M8: Altre Sorgenti Mobili;
- M9: Trattamento e Smaltimento Rifiuti;
- M10: Agricoltura;
- M11: Altre sorgenti di Emissione ed Assorbimenti.

La metodologia EMEP-EEA prefigura **due possibili procedure di stima delle emissioni** in atmosfera: *top-down* (“dall’alto verso il basso”) e *bottom-up* (“dal basso verso l’alto”).
